

Arrow's cloud backup for Microsoft 365

Safeguarding Microsoft 365
data

Version 1.0 May 2024

Do you know if your Microsoft 365 data is protected?

There is a common misconception among companies that Microsoft 365 products are backed up. However, Microsoft's shared responsibility policy states that Microsoft is an availability platform and that Microsoft's primary responsibility is taking care of the uptime of the M365 platform. Protecting the data itself remains the customer's responsibility.

Protect your most valuable asset

Arrow's cloud backup for Microsoft 365 is a managed service offering for data protection, created with the intent to safely backup and restore your Microsoft 365 data. This service provides comprehensive backup located in an IBM data centre worldwide, following a tier-system to ensure resilience and redundancy for maximum protection.

Accidental deletion

Retention policies

External threads

Departing employees

System failures

"The average length of time from data compromise to discovery is over 140 days. Default settings only offer protection for 30-90 days, after which it is either archived or permanently deleted."
